In addition there are caps, interior corners, wall covers for doors and windows and accessories for clamping, alignment tool (weiller).

A proprietary FORSA release agent is applied on the entire contact surface and sides of each of the panels using a plush roller, in two coats applied, prior to assembling. A levelled surface bed is essential for easy installation of the formwork and best performance, the surface bed must be at least 75 mm thick made from ≥ 20 MPa concrete. The size and type of the panel are pre-designed according to the architectural design of the proposed building.

Subject: Eezi Thermal Modular Building System

Certificate holder: EEZI Group Africa

Description: EEZI Thermal Modular Building System utilizes foundations and structural components which are always the responsibility of a registered competent engineer.

EEZI Thermal Modular Building System's structure is made up of isolated reinforced concrete bases which are set out on a 1.5 m grid. Bases are typically 500 mm diameter x 700 mm deep, with a tubular steel stub column cast into each base. Stub columns are made up of two cold-formed galvanised steel lipped channels (100 mm x 100 mm x 50 mm x 0.8 mm) connected toe to toe. The top 325 mm of the tubular stub column is pre-painted with a corrosion resistant paint.

External wall panels are 122 mm thick, manufactured from light-weight 90 mm x 50 mm x 0.8 mm cold-formed galvanised steel channel studs spaced at 600 mm centres with cross braced channels at the top and bottom of panels. The voids between the structural members are filled with 100 mm thick expanded polystyrene (EPS). The inside face of external walls is lined with 15 mm thick gypsum Firestop board. The internal face of wall panels is finished with gypsum skim plaster and the external face is finished with a 4 mm thick woven fibre glass mesh reinforced cementitious coating. The fibre glass fabric has a mass of 145 g/m² and a mesh size of 5 mm x 5 mm.

Internal wall panels are 127 mm thick, manufactured from light-weight 90 mm x 50 mm x 0.8 mm cold-formed galvanised steel channel studs spaced at 600 mm centres with cross braced channels at the top and bottom of panels. The voids between structural members are filled with 90 mm of EPS. Both faces of internal walls are lined with 15 mm thick gypsum Firestop board and finished with gypsum skim plaster.

EEZI Thermal Building System makes use of 128 mm thick panelised modular floors that are manufactured from light-weight cold-formed galvanised steel channel joists (90 mm x 50 mm x 0.8 mm) spaced at 600 mm centres with cross braced channels at the ends of panels. The void between joists is filled with 120 mm thick EPS. Panels are lined on the top and bottom face with a 4 mm thick woven fibre glass mesh reinforced cementitious coating. Typically, floor surfaces are finished with a 100 mm thick sand-cement un-bonded topping (20 MPa). Alternatively, fibre cement or magnesium oxide board may be used as a finish as directed by the registered competent person.

Roof panels are 100 mm thick and are manufactured from light-weight cold-formed galvanised steel channel rafters spaced at 600 mm centres with cross braced channels at the ends of panels. The void between channel rafters is filled with 100 mm thick EPS. Roof panels are supported on eaves walls, gable walls, internal walls, and where necessary on ridge beams. EPS roof times are glued to roof panels and dressed in a 3.5 mm thick fibre glass mesh reinforced cementitious coating. Once cured, the coating is finished with conventional roof paint.

All services are conventional and are either pre-fixed within the thickness of walls or surface mounted. These services must be specified and installed in accordance with good building practice.

Subject: Klevabrick Building System

Certificate holder: Astro Kretzmann Family Trust

Description: Klevabrick Building System is used for single-storey buildings. For use in two or more storey buildings a certificate from a registered professional competent engineer is required. The system comprises Klevabricks (blocks), raft foundations and roofs with insulated ceilings. Foundation footings are cast in in-situ raft foundation with a concrete surface bed. Deep rebates on foundation footings around the perimeter of the slab accommodate the external blocks.

Walls comprise steel reinforced concrete building blocks with compressive strength of 25MPa. Exterior wall Klevabricks comprise variations from K1 to K10, each of which serves a unique function in an exterior wall. Interior wall Klevabricks comprise variations from i1 to i4 each of which has a separate function in an interior wall. All Klevabricks are 260 mm high, a minimum of 145 mm wide and 435 mm long, except K3 and i2 which are 290 mm long.

Blocks are recessed both horizontally and vertically at each corner to allow for the interlocking of blocks in a building. The steel reinforcing is bent in such a manner so as to form loops in these pre-determined recesses both horizontally and vertically, through which 8 mm bolts are placed to connect and fasten adjacent Klevabricks together.

The different variations of Klevabricks include:

External Walls

- K1 – exterior Klevabrick
- K2 – exterior left corner Klevabrick
- K3 – exterior 290mm long Klevabrick (to fit a 435 mm x 435 mm grid)
- K4 – exterior Klevabrick + connection for inside wall
- K5 – exterior right corner Klevabrick
- K6 – exterior Klevabrick + electrical box on inside face
- K7 – exterior wall perpendicular left hand wall connection
- K8 – exterior wall perpendicular left hand wall connection
- K9 - exterior wall with inner recess applicable for suspended floor beams
- K10 – exterior wall Klevabrick derived from the K1 with an additional left hand lip to accommodate both door and window frames.

Internal Walls

- i1 – interior Klevabrick + centre wall connection + corner wall connections
- i2 – interior wall short Klevabrick to adjust lengths between Klevabricks
- i3 – interior 290 mm Klevabrick + electrical box on one side face
- i4 – interior Klevabrick facilitates laying of suspended floor beams over interior wall.

Roof trusses can be either conventional timber or galvanized light gauge steel. The trusses and the wall-plate are bolted to the connecting reinforcing loops of the top blocks.

Door and window frames are made from steel, timber, aluminium or Agrément approved material. Exterior Klevabricks K1 and K10 have moisture sealing lips which form a recess into which a door or window frame can fit. The provision of standard 20 mm diameter holes through certain blocks facilitates the easy connection and distribution of electrical points and copper water pipes within a building.

Subject: UL-M 20/10 Thin Bituminous Road Surfacing System

Certificate holder: National Asphalt (Pty) Ltd

Description: This certificate covers the use of UL-M 20/10 Thin Bituminous Road Surfacing system in all regions of South Africa. The system was assessed for use on roads classified as category 1A and 1B which means that the certificate is valid for:

- a maximum Annual Average Daily Truck Traffic (AADTT) of up to 7 000 in free flowing traffic situations, and
- an AADTT of up to 7000 in situation with slow traffic, such as intersections and lanes with inclines of more than 6 per cent respectively.

UL-M 20/10 is a thin bituminous road surfacing system generally laid to a nominal compacted thickness ranging from 20 - 40 mm. Principally it consists of a blend of modified bituminous binder Evatech U (EVA), graded crushed stone (aggregates) of nominal size 10 mm and a filler. The UL-M 20/10 is applied by a paver over a tack coat. It is designed to provide improved skid resistance and reduce tyre/surface noise levels and, where required, reduce permeability.

UL-M 20/10 was developed in the 1980's in France by Enterprise Jean Lefebvre and it carries the British Board of Agrément certification (Roads and Bridges Agrément Certificate No 01 / H047). It is extensively used around the world including Europe, USA, and South America. It has successfully been used on a number of sites in South Africa. National Asphalt (Pty) Ltd is licensed to manufacture and apply the product in South Africa.

The mix design, manufacturing and application of the product is to be strictly controlled and under the supervision of a registered professional engineer and approved by the manufacturer's Technical Manager. The mix proportions may vary slightly from area to area, depending on the traffic, substrate (road base) and the actual properties of the stone received. Aggregates must meet specifications with respect to grading, strength, shape, polished stone value and aggregate/ bitumen compatibility etc.

Subject: I-Wall Building System

Certificate holder: Insulated Build Manufacturing (Pty) Ltd

Description: I-Wall Building System is a single-storey structure that utilises factory produced panels that consist of 100 mm thick expanded polystyrene (EPS) for external walls and a 100 mm or 75 mm thick EPS for internal walls. Wire mesh, which acts as plaster key is secured to both sides of the wall panels. Wall panels are then rendered both sides with 25 mm thick spray applied plaster with the resultant overall thicknesses of 150 mm and 125 mm, respectively.

Both external and internal EPS panels have a density of 16 kg/m³ and they are 2400 mm high with 600 mm, 900 mm or 1200 mm widths. The heights of gable wall panels are determined by the pitch of the roof. Wall panels have grooved vertical edges which accommodate column Masonite biscuits projecting either side to slot into the EPS wall panels.

Wall panels are strengthened with back to back 63.5 mm x 35 mm x 0.5 mm galvanised mild steel lipped channel columns with a tempered Masonite biscuit sandwiched between the channels which slot into the EPS wall panels. Walls are secured at the bottom by a 102 mm or 77 mm x 30 mm x 0.5 mm galvanised mild steel base rails and at the top with back to back 102 mm x 30 mm x 0.5 mm galvanised mild steel ring beams with a 114 mm x 38 mm timber wall plate slotted into the top channel.

Foundations are concrete rafts comprising 75 mm thick surface beds on damp proof membranes with thickened perimeter edge beams. Surface beds are also thickened under internal walls.

Roof construction is conventional. Trusses can either be timber or light gauge mild steel with light- or heavy-weight cladding. Door and window frames can be aluminium, timber, precast concrete or Agrément SA approved.

Subject: Polo-Pave Thin Bituminous Road Surfacing System

Certificate holder: Polokwane Surfacing (Pty) Ltd

Description: Polo-Pave is a thin bituminous road surfacing system generally laid to a nominal compacted thickness ranging from 18 - 25 mm. Principally it consists of a blend of bituminous binder, graded crushed stone (aggregates) of nominal size of 14 mm or 10 mm, and filler. The product is a porous asphalt wearing course with a void content in excess of 18 per cent. The voids are interconnected, providing a means of conveying rain water to the pavement boundaries.

Polo-Pave was originally manufactured by Hillary Construction (Pty) Ltd., and has since been taken over by Polokwane Surfacing (Pty) Ltd. (part of the Hillary group of companies). Although the product is still original, the processes in manufacturing and installing have improved over time. Polo-Pave is recommended to be used in areas where water tends to accumulate or where a water hazard could reduce traffic capacity or impair traffic safety. Typical areas are at changes in super-elevation, busy motorways, or wide pavements (highways, runways).

The mix design, manufacturing and application of the product is to be strictly controlled. The mix proportions may vary slightly from area to area, depending on the aggregate available in the area. Bitumen binder to be used (penetration-grade bitumen or modified binder) is determined in the design process based on site-specific conditions. Polo-Pave manufactured in a hot mix plant, and applied by a self-priming paver or conventional paver, over an impermeable tack coat.

CALEDON MODDER SUBSYSTEM – LIMITING THE USE OF WATER IN TERMS OF ITEM 6 OF SCHEDULE 3 OF THE NATIONAL WATER ACT OF 1998 FOR URBAN AND IRRIGATION PURPOSES FROM THE DAMS WITHIN THE CALEDON-MODDER SUBSYSTEM

I, **Sifiso Mkhize**, in my capacity as Acting Director-General of the Department of Water and Sanitation, on reasonable grounds believe that a potential water shortage exists in the Caledon Modder Subsystem. This is due to insufficient rains and infrastructural constraint that is limiting transfer capacity from the Caledon to the Modder sub-system.

In terms of Item 6(1) of Schedule 3 to the Act, the Minister of Water and Sanitation may limit the use of water if on reasonable grounds the Minister believes that a water shortage exists within the area concerned. This power has been delegated to me in terms of section 63 (1) (b) of the Act.

Therefore in my capacity as the Acting Director-General of the Department of Water and Sanitation, I hereby under delegated authority in terms of item 6 (1) of Schedule 3 to the Act limit the taking of water from the Caledon-Modder subsystem by all users as follows:

- a) 20% restriction on water use for Domestic and Industrial supply to the Mangaung Metropolitan Supply area (including other small towns supplied from Caledon-Modder subsystem), and the towns of Ladybrand within the Mantsopa Municipality and Ficksburg within the Setsoto Municipality as well as Fouriesburg within the Dihlabeng Municipality.
- b) 35% restrictions on the use of water for Irrigation purposes in the Modder River sub-catchment upstream of Maselspoort Dam.
- c) 35% restrictions on the use of water for Irrigation purposes in the Caledon and Little Caledon River sub-catchment upstream of Welbedacht Dam.
- d) 100% restriction on the use of water for Irrigation purposes in the Caledon and Little Caledon River sub-catchment upstream of Welbedacht Dam when water is released from the Lesotho Highlands Water Project.

The limitations apply from the date of this notice until further notice.

In exercising the powers, I have given preference to the maintenance of the Reserve, treated all water users on a basis that is fair and reasonable, considered the actual extent of the water shortage, the likely effects of the shortage on the water users, the strategic importance of any water use and any water rationing or water use limitations by a water services institution having jurisdiction in the area concerned under the Water Services Act 108 of 1997.

Placing limitation on the taking of water use as set out in this notice is an administrative action affecting the rights of the public as contemplated in section 4 of the Promotion of Administrative Justice Act 3 of 2000 (PAJA). After I have taken into consideration all relevant factors, including those referred in section 4 (4) (b), I have decided that it is reasonable and justifiable in the circumstances to depart from the requirements referred to in section 4 (1) (a) to (e), (2) and (3) and instituted this limitation without allowing the water users affected and other role players to comment on the matter before I institute the limitation.

This notice overrides any other previous authorization on water restrictions issued by the Department relating to this area.
